Installation of JES3 in Ruffing Center

The Office of Data Processing (ODP) plans to install
the Job Entry Subsystem (JES3) on its Batch computers in
the Ruffing Center on 6 September 1977. This system will
replace the current ASP scheduling system. We have been
testing the JES3 system in isolated and test-production
modes over the past several months. Several Technotes and
a JES3 User Requirements Manual have been published describing
this system, its impact on user jobs, and the steps users must
take to ensure proper execution of their jobs under a JES3
environment. We are confident that all user applications
will run successfully in the JES3 environment if the published
guidelines are followed. We have notified all ADP Control
Officers by memorandum and asked them to ensure that their
offices have fully tested their batch applications under this
new system.

STATINTL

FY-79 Budget Completed

The FY-79 OMB Zero-Base Budget was completed and sub-
mitted to the DDA Budget Staff and to the Comptroller. There
are 43 decision packages in the ODP budget.   STATINTL

Information Requested for EAG Project Review

All ADP Control Officers have been requested to provide
information for the EAG Project Review of major ADP projects.
This is a follow-up to a "dry run" that was made for one
Office in each Directorate.   STATINTL

CAMS

COMIREX has notified ODP that they will need CAMS support during the power outage scheduled for the weekend of 10-11 September. This outage will affect both the GC-47 Computer Center and the DATEX switching station which carries all messages to and from CAMS. We are investigating the various possibilities for providing some level of support.

STATINTL

SAFE

The Booz-Allen Applied Research Study Team presented the results of its SAFE/ADISS Commonality Study to the Intelligence Research and Development Council on 17 August 1977. The presentation was generally well received with the exception of the organizational structure recommended.

ADSTAR

Members of the Source Evaluation Board (SEB) visited the Harris and Ragen Companies, offerors of ADSTAR Phase I proposals.

An amendment (number 4) to the ADSTAR RFP was issued to divide the deliverables into three separate packages. The offerors have been asked to price each package separately.

STATINTL

Support to Office of Geographic & Cartographic Research

CARTDEV - Developmental support to the Cartographic Division. Testing of the Engineering Topographic Laboratory (ETL) line smoothing subroutine indicates that it will fulfill OGCR's requirements. The program will support OCGR's effort in digitizing the 200 mile fishing limit for the Law of the Sea Project.

STATINTL

Minicomputer RFP. We are continuing our technical support to the OGCR Agricultural team in their generation of an RFP for the acquisition of a minicomputer based Meteorological, Agronomical, Geographic Analysis System (MAGAS). We expect the RFP to be completed by the end of September 1977.

2

Support to Office of Security

SACS - Security Access Control System. We have completed all ODP work associated with interfacing SACS with existing Security and Personnel ADP systems. This effort required 18 months to complete and cost approximately $184K for personnel and computer time.

Support to Office of Finance

FRS - Financial Resource System. We continued our support of the Agency's FY-79 OMB Budget Exercise by producing final reports for the Directorates on 15 August. These reports accompanied the Zero-Base Budgeting (ZBB) narratives prepared by the Offices and the Directorates for each decision unit. Additional reports requested by the Office of the Comptroller are planned for production during the next two weeks. They will be part of the Agency's FY-79 budget submission due in OMB by mid September.

Training

A four day course, Intermediate VM, was completed by 14 students.
